

ABSTRACT OF THE DISCLOSURE

A tool for bleeding a master cylinder when the master cylinder is unattached to a vehicle.

In an exemplary embodiment a bleeding tool includes a shaft attached by means of clamp rods to a master cylinder flange, a clamp handle rotatable with respect to the shaft, and a push rod coupled to the clamp handle through a movable rotatable joint. In an exemplary embodiment, the maximum motion of the push rod during a bleeding cycle is defined by a set of two pins disposed on a ring concentric with the shaft.
